Name: \_\_\_\_\_ Date: \_\_\_\_\_

## How Crayons are Made

Crayola LLC is one of the leading retailers for crayons. They make over 120 different colors of crayons! This includes 23 shades of red, 16 shades of purple, and 20 shades of green. The factory in Easton, Pennsylvania produces 12 million crayons every single day. The process of making crayons is quite involved.

Two times a week, railcars are delivered to the factory. These railcars are full of paraffin wax. This is the main ingredient used to make the famous crayons. The railcars are heated by steam that is created by a special boiler. The steam is used to heat and melt the wax. Once the wax is melted, it is pumped into silos. Each silo can hold as much as 100,000 pounds of wax! The factory uses one silo of wax daily to make their crayons.

From the silos, the wax travels through pipes into large kettles, or tanks, used to hold liquid. Powdered pigment is added to the kettles and mixed in with the wax to create the desired crayon color. Special pumps then move the colored melted wax to a steel rotary. At the end of this rotating surface are the molds for crayons. The wax is placed into the molds. The wax stays in the molds for about seven minutes to cool. After the crayons have been formed and hardened, they are ejected, or popped out of the molds. A robotic arm then transports them from there to another machine that attaches labels to the crayons.

## Classrooms Around the World

It's no surprise that in the **plethora**, or abundance, of schools all over the world, you will find all types of spaces that students learn in. There are crowded schools, spacious schools, well-resourced schools, inner-city schools, international schools, all-boys schools, and all-girls schools, just to name a few. Each classroom looks different and has students with different backgrounds. No matter which classroom you go into, they do have one thing in common: learning is taking place.

## Classrooms Around the World

It's no surprise that in the **plethora** of schools around the world, you will find all types of spaces that students learn in. Crowded schools, spacious schools, well-resourced schools, inner-city schools, international schools, outdoor schools, all-boys schools, and all-girls schools are just a few. Each classroom looks different and is made up of students with different backgrounds. No matter which classroom you go into, they do have one thing in common; learning is taking place.

First, students use a variety of different ways to get to school. In the United States and Canada, students will usually walk, ride the bus, or take cars. In other places, like Peru and Guatemala, many students take boats to cross rivers. This is because they might need to get to their schools on the other side. Students in the Philippines often ride **rickshaws** (see photo), and students in Bolivia might use horse-drawn wagons to get to school.

First, it is important to recognize that students use a variety of different ways to get to school. In the United States and Canada, students will usually walk, ride the bus, or take cars. **Crayola Company History**

As time passed, Binney & Smith created other art products such as chalk and colored pencils. They even **acquired**, or gained, the rights to products such as Silly Putty. Over the years, they've won many awards for their products.

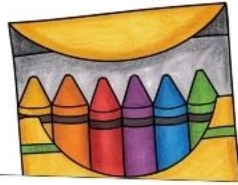

Binney & Smith introduced more crayon colors and eventually produced boxes of 64 colors in 1958. Washable markers and pencil crayons were also introduced by Crayola. Today there are 120 different crayon colors. With more colors to come. With more colors to come. With more colors to come.

**Crayola Company History**

Crayola™ is a brand used by artists and students everywhere! Crayola products are sold in over 80 countries worldwide. They are best known for the large variety of colors they use for their crayons.

Crayola has always had a colorful background. The company was first founded over a hundred years ago. The founders never thought that the company would grow as much as it has over the years.

Edwin Binney and C. Harold Smith were cousins who founded Binney & Smith in New York in 1885. The company originally produced colorant for industrial use. For example, they made the pigments used to color barn paint and the chemicals used to make tires black.
